UNI SLAB sintered stones are advanced surface material created by compressing and firing natural minerals under extreme heat and pressure. Resulting in a durable, non-porous slab that replicates the beauty of natural stone while offering greater resistance to stains, scratches, heat, and everyday wear. It is designed for modern living, making it suitable for kitchen countertops, kitchen islands, dining tables, wall cladding, bathroom surfaces, flooring, and custom furniture applications.

UNISLAB⁺

UNISLAB+ features a matte structured surface that adds depth, texture, and a more natural stone feel. The subtle tactile finish enhances the character of each design, creating richer visual movement under changing light.
